Problems And Solutions To Accompany Chang's Physical Chemistry For The Chemical & Biological Sciences

Synopsis

This Solutions Manual to accompany Raymond Chang's Physical Chemistry for the Chemical and Biological Sciences restates each of the 1020 innovative chapter-ending problems in the text, followed by a detailed solution. Each solution is approached with the same conversational style that the authors use in their own classrooms as they try to "teach" solutions to the problems rather than simply giving out answers. One hundred forty-three figures and diagrams are used to illustrate the solutions. Both authors are recent recipients of the Henry Dreyfus Teacher-Scholar award and bring to the manual effective pedagogy as well as the vitality of modern physical chemistry.

Customer Reviews

If you buy the book, you definatly need the soloution manual. Great buy, helped me get a B (yu know its a hard class)

I only bought this because I needed it for one of my undergraduate courses, but of all the solution manuals that I've had to encounter, I really like this one. It explains things well and will get you the correction you need for the problems that go with the book chapters and sections. The explanations also help when it comes to studying for a test. It was worth the money! I passed the class with flying colors!! :)

I know this is a solution manual and could be looked at as cheating, but if you work the problem first the way you think it should and then review it in the manual, it is a perfect tool for understanding the

topic. Don't tell anyone, but it's actually a really fun class.

When I received this solutions manual, I thought it was going to be just another book that has the usual errors. But for the problems I have looked at, they were dead on and the answers were very thorough and concise. I would really recommend this to anyone studying for physical chemistry.

The solution manual is very useful for self learning. It has procedures and answers which help a lot. I was pleased with the product.
